

## 3.1 cadwork start general

The *cadwork start* program is both the start-up program for all cadwork modules, such as 2D or 3D, and a central element for configuring the cadwork program parameters for all modules. It is therefore advisable, after installation, to check all parameters here once again and adapt them to your own requirements, if necessary. After initial installation, you may also need *cadwork start* to obtain a cadwork license. If you haven't yet received or downloaded your license, it's best to go to the [License](#) section first.
