

3.2 Program tab

In the *Program* tab you can start any type of cadwork files.

Program tab in cadwork start

1. The module to be started can be selected via the individual registers.
2. All saved standard files (Templates for new files, *init files*) of the respective module can be selected here.
3. Enter project name:
The name for the new file can be defined here. Once the *OK* button is then clicked, the file will be created and opened.
4. *Last files opened:*
When you click on the respective module, the most recently opened files are displayed and can then be opened again quickly. The newest one is at the top of the list.
5. If several versions of Cadwork are installed, the version can be changed here. However, the most recent version should remain selected as the default.
