

## 4.4 Silent installation

Important!

Silent installation of cadwork, using the *cwsetup.exe* program and the *unattended.ini* setup file, is intended for first-time installation or version upgrades. This type of installation is not intended for in-progress upgrades.

With silent installation, all user inputs, such as access paths or language, are defined via parameters or a configuration file.

The installation itself then only needs to be started and runs independently, without any further user intervention.

## Configuration file

The cadwork installation uses the *unattended.ini* file to configure silent installation. This file must be located in the same folder as the *cwsetup.exe* file that will be executed.

 CWSetup.exe

 unattended.ini

*The unattended.ini file must be located next to the cwsetup.exe file.*

On the following pages you'll find the settings for the different cadwork versions.
