

4.2 Downloading installation packages

The content of this chapter is aimed at IT specialists who wish to go further in configuring and automating cadwork installation, either by scripting or by using one of the various cadwork options. Whichever system you choose, you will need to have downloaded the installers at least once.

All offline setups mentioned on this page are compiled **on a weekly basis**, i.e. end of day Sunday with the latest updates.

The different types of offline setup

There are two types of offline setup: offline setup with or without catalogs, cadworkprofil and userprofil, and offline setup for configuring a network license.

Program setups

In addition to the classic web-based solution, *cadwork* also offers an offline solution for download. The offline installer unzips a complete update folder and, if desired, launches an Offline Installation via *CWSetup*.

There are two variants of offline setup:

- **With** catalogs, cadworkprofil and userprofil
- **Without** catalogs, cadworkprofil and userprofil

Links to the various offline setups are provided in the following subchapters.
