

3.5.21 3D component overview...

The "3D components preview" window is located in the "Dialogue" menu

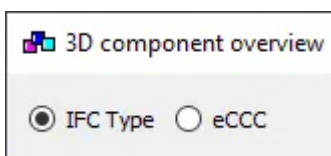

This window allows to have, as its name indicates, an overview of all the components existing in the 3D model

It is possible to get basic measurements such as gross and net m3, m2 and m. Other parameters like (Exterior, carrier, materials, steps, ... can be displayed here)

There are 2 main options for the user:

1. Work with IFC types
2. Work in eCCC mode, according to a standard item catalog (CAN)

Depending on the mode used, it is possible to make a CSV export to process the data in other software.
